                                           The specification describes an endogenous substrate for detecting herpes virus protease. Human p180 protein is specifically digested at the latter stage of the infection with Herpes virus protease, and so a substrate for this enzyme. The invention uses peptides comprising a cleavage site derived from human p180 protein. The substrate is used

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     19647
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      19545
                                                              The present invention relates to nucleic acid sequences (ABQ67188-ABQ71212) from Listeria sprobes equences are useful as probes and primers for identification and/or dhetection of Listeria (e.g. as contaminants in foods, or mutational analysis) and for analysis of gene expression. Proteins encoded by the nucleic acid sequences can be used to screen for compounds that modulate gene expression, replication and pathogenicity of Listeria (potential therapeutic agents), also for
anti-Listeria vaccines.
Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic
                                                 and pathogenicity of Listeria (potreating infections by Listeria,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ABQ69245;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     primers derived from the fragment of the S. pneumoniae genome to prime the amplification and isolating the amplified sequences. The computer readable medium can be used in a computer-based system for identifying fragments of the S. pneumoniae genome of commercial importance, or expression modulating fragments of the S. pneumoniae genome. Products from the present invention can be used in diagnosis kits and assays, and pharmaceutical compositions and vaccines for S. pneumoniae.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 750 BP; 195 A; 238

                          New genomic sequences from Listeria species, useful treatment and prevention of infection, also related antibodies and modulators \,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ABQ67197
                                                                                                                                                                                                                                                                                    The present invention relates to nucleic acid sequences (ABQ67188-ABQ71212) from Listeria sp. The sequences are useful as probes and primers for identification and/or detection of Listeria (e.g. as contaminants in foods, or mutational analysis) and for analysis of gene expression. Proteins encoded by the nucleic acid sequences can be used to screen for compounds that modulate gene expression, replication and pathogenicity of Listeria (potential therapeutic agents), also for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      04-OCT-2000; 2000FR-0012697
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             04-OCT-2001; 2001WO-FR03061
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      11-APR-2002

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        QΥ
                      The present invention describes a computer readable medium which has the nucleotide sequences SEQ ID NO:1 to 391 (AAV52134 to AAV52524) recorded on it, or a representative fragment or a sequence at least 95% identical to SEQ ID NO: 1 to 391. The nucleotide sequences depicted in SEQ ID NO: 1 to 391 (AAV52524) are genomic fragments from Streptococcus pneumoniae. The present invention also describes an isolated nucleic acid molecule encoding a homologue of any of the regments of the S.pneumoniae genome (SEQ ID NO:1 to 391) where the nucleic acid molecule is produced by a process comprising: (a) screening a genomic DNA library using as a probe a target sequence defined by any of the sequences in SEQ ID NO:1 to 391, identifying members of the library which contain sequences that hybridise to the target sequence and isolating the nucleic acid molecules from the members; or (b) isolating mRNA, DNA or cDNA produced from an organism, amplifying nucleic acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Computer-readable medium with recorded Streptococcus pneumoniae polynucleotide sequences - useful in diagnostic kits and assays, pharmaceutical compositions and vaccines for Streptococcus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            AAV52503
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Claim 1;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-ABB72072).

                                                                                                                                                                                                                                                The present invention describes a computer readable medium which has CC the nucleotide sequences SEQ ID NO:1 to 391 (AAV52134 to AAV52524) CC recorded on it, or a representative fragment or a sequence at least 95% CC identical to SEQ ID NO: 1 to 391. The nucleotide sequences depicted in CC SEQ ID NO: 1 to 391 (AAV52134 to AAV52524) are genomic fragments from CC streptococcus pneumoniae. The present invention also describes an CC isolated nucleic acid molecule encoding a homologue of any of the CC fragments of the S.pneumoniae genome (SEQ ID NO:1 to 391) where the CC nucleic acid molecule is produced by a process comprising: (a) screening CC a genomic DNA library using as a probe a target sequence defined by any CC of the sequences in SEQ ID NO:1 to 391, identifying members of the CC library which contain sequences that hybridise to the target sequence and CC isolating the nucleic acid molecules from the members; or (b) isolating CC molecules whose nucleotide sequence is homologous to amplification and isolating the amplified sequences. The computer CC the amplification and isolating the amplified sequences.
                                                                                                                                    Sequence
                                                                                                                                                                                  readable medium can be used in a computer-based system for identifying fragments of the S. pneumoniae genome of commercial importance, or expression modulating fragments of the S. pneumoniae genome. Products from the present invention can be used in diagnosis kits and assays, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Claim 1; Page 1383-1384; 1409pp; English

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        δõ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Вþ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             RESULT
                         The present invention describes a computer readable medium which has CC the nucleotide sequences SEQ ID NO:1 to 391 (AAV52134 to AAV52524) CC recorded on it, or a representative fragment or a sequence at least 95% CC identical to SEQ ID NO:1 to 391. The nucleotide sequences depicted in CC SEQ ID NO:1 to 391 (AAV52134 to AAV52524) are genomic fragments from CC streptococcus pneumoniae. The present invention also describes an CC isolated nucleic acid molecule encoding a homologue of any of the CC fragments of the S.pneumoniae genome (SEQ ID NO:1 to 391) where the CC nucleic acid molecule encoding a brook of the 391) where the CC quencies in SEQ ID NO:1 to 391, identifying members of the S.pneumoniae genome (SEQ ID NO:1 to 391) where the CC isolating the nucleic acid molecules from the members or the target sequence and CC isolating the nucleic acid molecules from the members; or (b) isolating CC molecules whose nucleotide sequence is homologous to amplification primers derived from the fragment of the S. pneumoniae genome to prime CC readable medium can be used in a computer-based system for identifying fragments of the S. pneumoniae genome to prime CC expression modulating fragments of the S. pneumoniae, Products of from the present invention can be used in diagnosis kits and assays, and pharmaceutical compositions and vaccines for S. pneumoniae.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             7972
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              7909
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             7912
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Barash

The leukotoxin protein can expressed by standard recombinant methodology. The leukotoxin gene useful for preparing a vaccine which confers effective immunity againfection caused by F. necrophorum. The vaccine is useful for immunant an animal against liver abscesses caused by F. necrophorum and for preventing foot rot caused by F. necrophorum infection. The present

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                invention is also useful for the identification of potential new targets for antibiotic development. The antisense nucleic acids can also be used to identify proteins used in proliferation, to express these proteins, and to obtain antibodies capable of binding to the expressed proteins. The proteins can be used to screen compounds in rational drug discovery programmes. The antisense nucleic acid sequence is also useful to screen for homologous nucleic acids which are required for cell proliferation in a wide variety of organisms. The present sequence encodes an essential prokaryotic cellular proliferation protein.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              prokaryotic cellular proliferation, their use in identifying the genes, their use in the discovery of novel antibiotics, the essential genes themselves and the encoded proteins. The prokaryotes used are Escherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella pneumoniae, Pseudomonas aeruginosa and Enterococcus faecalis. The processing the control of t
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        3394
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 3490

                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention provides an isolated Fusobacterium necrophorum leukotoxin polypeptide and its truncated versions. The leukotoxin protein can be expressed by standard recombinant methodology. The leukotoxin gene is useful for preparing a vaccine which confers effective immunity against infection caused by F. necrophorum. The vaccine is useful for immunising
